# Rise to Immunize™ //// Blinded Comparative Report

November, 2023

### Group-weighted average of vaccination rates across all organizations, year-over-year

Cumulative Measurement Year (MY) rates as of Q3 in each year

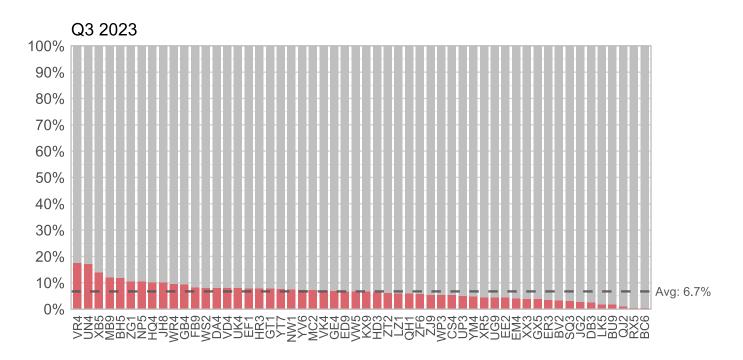

This plot compares the average rates of all Q3s in the campaign so far, including Q3 2023 (the most recent reporting quarter). This is the beginning of a new Measurement Year/flu season.

- The average pneumococcal vaccination rate across all organizations increased by 2.8% this year (Q3 2023) compared to last year (Q3 2022), an encouraging sign that groups have rapidly adapted to the new conjugate-only measure after a full year.
- The Td/Tdap vaccination rate has increased by 2.3%, which is that fastest rate of increase in Td/Tdap seen thus far!
- The downward trend of influenza vaccination rates is persisting in the first quarter of this flu season.
- Zoster vaccination rates increased by 4.3%. The steady rate increase continues!
